

Course Information...

Communicating safety policies and involving employees can be challenging. In today's work environment you will need to use all the "Tools in the Tool Box".

This Workshop emphasizes Safety Programs that require employee involvement. Employee participation initiates a Safety thought process and encourages development of Safety Programs that are usable and acceptable to workers.

An effective Safety Committees should be the foundation for developing, communicating and/or improving organization Safety Policies. Committee members need to communicate up and down the organization ladder.

Topics covered in this two day workshop provide those "Tools" needed to investigate, evaluate, mitigate and communicate safety issues to all levels in your work organization.

Supervisors, Safety Committee Members and Safety Team Members should leave this workshop with a better understanding of how to recognize and address safety concerns, and develop and clearly present solutions to management and other employees. Networking and sharing ideas is an important part of the workshop.

Our mission is to help employers reduce injury to employees through education and training, reduce pain and suffering, and reduce costs resulting from accidents in the workplaces of North Carolina.
